ROCKET COMMERCE SUMMARY

Rocket Commerce is an inventory driven multi-channel commerce platform with full support for both multiple outlets and stores. Designed to power eCommerce applications as well as featuring an advanced point-of-sale interface for in-store.

By using our centralised system, all of your business data is in one place. This removes any unnecessary duplication (e.g. product databases) and makes available more useful information (inventory across all of your stores).

KEY ROCKET COMMERCE FEATURES

- Record and manage sales from multiple outlets in a single centralised system
- Purchase orders and recording of deliveries into stock
- Inventory for multiple stores maintained independently but can be reported on as a whole
- Real-time stock allocations preventing the sale of unavailable goods
- Returns processing and aftersales management
- Batch fulfilment options
- Fully compatible with product types requiring variants or custom options
- Secure web browser interface allowing full control from any location with familiar controls reducing training requirements
- Regular updates automatically rolled out to everyone
- Customisable for any bespoke features that may be needed

BESPOKE FRONT-END WEBSITES

- Fully responsive to adapt to any device screen size
- Built entirely on the Rocket Commerce platform enabling native integration with all of your business data – such as real-time stock availability
- Customer area with comprehensive order details

Inventory driven eCommerce saves time by never needing to update availability statuses of products, enhances the customer experience by preventing the sale of unavailable goods and improves accuracy by recording the actual cost of sales for each sale.
